Wall coverings can be cleaned manually using a soft sponge or a microfiber cloth with lukewarm water (approx. 30°C) and commercially available soap solution. The cleaning process should be carried out with even pressure in a circular motion. After careful rinsing, the material must be dried. Use an absorbent cloth to gently dab over the cleaned area and then allow to dry in the air.

We recommend that the treatment be checked beforehand for possible color changes on a less visible part of the fabric.
