

Cleaning prior to Installation of Car Wrapping Films

We recommend the following cleaning procedure prior to the installation of our car wrapping films:

First, clean the vehicle only with **BRUXSAFOL Pre-Wrap Surface Cleaner**. Our cleaner has been tested on current paints and on our adhesive system. If other cleaners are used, undesired interactions may occur when removing the film. BRUXSAFOL accepts no liability for additional work or paint damage in such cases. Please refer to our technical processing instructions. You can find them on our website.

For a higher safety level, you can apply our **BRUXSAFOL lacquer sealant** to the vehicle's paintwork before applying the film.

This will offer additional help, when removing the film at a later time.

The recommended products can be found in our tool catalogue:

Lacquer Sealant

Installation aid for car wrapping films, lacquer sealing prior to installation. Facilitates easy removal of the film during the neutralization process, 500 ml bottle.

Art. no. T21018

Pre-Wrap Surface Cleaner

For the pre-cleaning of paint surfaces. Simply apply with an absorbent cotton or microfibre cloth and rub surface dry. The product is suitable for use on most painted surfaces. In case of doubt, however, the cleaner should be tested first on an inconspicuous area of the surface, 1 litre.
